

Infection Prevention and Control in Nonacute Care Settings

(Draft Table of Contents)

Chapter 1: Developing an Infection Prevention and Control Program

- First Things First: Understanding Joint Commission Standards
- Aligning Standards; Evidence-Based Goals; and Federal, State, and Local Regulations
- Building a Solid Foundation for Your Nonacute Care Setting's Infection Prevention and Control Program
- Developing a Written Infection Prevention and Control Plan

Chapter 2: Identifying and Assessing Risks

- Preparing for Your Risk Assessment
- Risk Assessment Steps
- Choosing a Risk Assessment Tool
- Setting and Prioritizing Goals

Chapter 3: Mitigating Risks

- Mitigating Risks Associated with Specific Procedures
- Addressing Risk of Exposure to Pathogens
- Creating a Successful Surveillance Program
- Implementing Effective Clinical Strategies/Standard Precautions
- Personal Protective Equipment
- Hand Hygiene
- Respiratory Hygiene/Cough Etiquette
- Safe Injection Practices
- Managing Care Transitions and Information Transfer

Chapter 4: Cleaning, Disinfecting, and Sterilizing for Infection Prevention and Control

- Understanding the Importance of Proper Reprocessing
- The Spaulding Classification System
- Selecting and Using Cleaners and Disinfectants
- Manufacturers' Instructions
- Transportation of Soiled Items
- Training, Education, and Competence of Staff Performing Reprocessing
- Location and Design of High-Level Disinfection and Sterilization Areas
- Disposal of Medical Equipment, Devices, and Supplies
- Storage of Medical Equipment, Devices, and Supplies
- Additional Challenges to Consider in Nonacute Settings

Chapter 5: Preparing for Infectious Disease Emergencies

- Preparing for a Sudden Increase in Infectious Patients/Residents/Individuals Served
- Isolation Practices
- Occupational Health and Safety
- Communication
- Allocating Resources
- Recovery

Appendix: Matrix of Joint Commission Infection Prevention and Control Standards
